

Job Title: Graduate Engineer - Backend Developer

Base Location: Gurugram

Work Location: Work From Office – 5 Days a Week

Job Type: Full-Time

Experience Level: Freshers / 0–1 Year

Target Colleges: Reputed Engineering Colleges (B.Tech / B.E.)

Job Summary:

We are hiring Junior Backend Developers who are excited about building intelligent, scalable software. This role is for fresh graduates with a strong programming foundation in Python, Java, or .NET, who are eager to integrate cutting-edge AI and LLM capabilities into real-world backend systems. You will work alongside experienced engineers to develop APIs, microservices, and AI-powered workflows that serve enterprise-grade products. If you love writing clean backend code and want to build applications that harness the power of AI tools — this role is for you.

Key Responsibilities:

Backend Development & API Engineering

- Design and develop RESTful APIs and backend microservices using one or more of the following: Python (FastAPI / Django / Flask), Java (Spring Boot), or .NET (ASP.NET Core / C#).
- Build modular, maintainable, and testable backend code following SOLID principles and clean code practices.
- Utilize AI coding tools like Claude, Cursor, Copilot as productivity improvement tools
- Develop, test, and document APIs that serve as integration points between AI services and core business logic.
- Work with relational databases (PostgreSQL, MySQL) and NoSQL databases (MongoDB, Redis) for data storage and caching.
- Implement authentication and authorisation mechanisms (OAuth2, JWT) for secure API access.

AI & LLM Integration

- Integrate AI and Large Language Model (LLM) APIs — including OpenAI (GPT), Anthropic (Claude), and Google (Gemini) — into backend services and product features.
- Build and maintain prompt engineering pipelines and manage prompt templates for consistent, reliable AI outputs.
- Implement Retrieval-Augmented Generation (RAG) workflows connecting LLMs to enterprise knowledge bases and vector stores.
- Work with AI orchestration tools and frameworks such as LangChain to chain multi-step AI reasoning flows.
- Optimise API calls to LLM providers for cost, latency, and token efficiency.

Registered Office: 508, Main Road, Gandhi Colony, Muzaffarnagar, Uttar Pradesh, - 251001

Business Office(s): 117, 125, 126, AltF, Suncity Success Tower, Golf Course Ext. Road, Sector 65, Gurugram, Haryana - 122101
101-105, 126-131, AltF, Suncity Success Tower, Golf Course Ext. Road, Sector 65, Gurugram, Haryana - 122101

eMail: people@engineo.solutions

System Design & Integration

- Participate in system design discussions and contribute to backend architecture decisions appropriate to the task.
- Integrate backend services with message queues (Kafka, RabbitMQ) and event-driven architectures where applicable.
- Work with DevOps and cloud infrastructure teams on containerised deployments using Docker and Kubernetes basics.
- Consume and integrate third-party SaaS APIs and enterprise platform services.

Code Quality & Agile Delivery

- Write unit tests and integration tests to maintain code quality and service reliability.
- Participate in peer code reviews, providing and receiving constructive technical feedback.
- Follow Agile/Scrum practices — sprint planning, daily standups, sprint reviews, and retrospectives.
- Maintain clear technical documentation for APIs, services, and integration patterns.

Qualifications & Experience:

Education & Technical Skills

- B.Tech / B.E. in Computer Science, Information Technology, Electronics, or a related engineering discipline.
- Strong programming proficiency in at least one of: Python, Golang, Java, or C# / .NET.
- Solid understanding of RESTful API design principles and HTTP fundamentals.
- Working knowledge of at least one relational database and SQL.
- Familiarity with version control using Git and collaborative development workflows.
- Genuine curiosity about AI tools, LLMs, and their real-world applications in software products.

Good to Have

- Hands-on exposure to OpenAI API, Anthropic Claude API, or similar LLM platforms (personal projects or coursework counts).
- Familiarity with LangChain, LlamaIndex, or similar AI orchestration frameworks.
- Experience with Spring Boot (Java) or ASP.NET Core (.NET) for building web services.
- Basic Docker knowledge for containerised development environments.
- Understanding of RAG architecture and vector databases (Pinecone, Chroma, Weaviate).
- Exposure to cloud platforms: AWS, Azure, or GCP.

Soft Skills

- Strong logical and problem-solving mindset.
- Collaborative team player who communicates clearly on progress and blockers.
